

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Cancelled)
2. (Currently Amended) The method of claim 50~~4~~ further comprising the step of specifying a feature-value set for a~~the~~ plurality of user network terminal devices, said feature-value set including a set of selected device features with one or more discrete feature values assigned to each said selected device feature, each said selected device feature selected from the features of the plurality of user network terminal devices in accordance with a pre-established criterion.
3. (Original) The method of claim 2 wherein said set of selected device features comprises a member of the group consisting of display size, aspect ratio, display line count, color capability, graphics capability, variable size text capability, different font capability, input capability, and input bandwidth.
4. (Original) The method of claim 2 wherein said pre-established criterion includes a determination that a particular said selected device feature affects the manner in which the authored content is presented.
5. (Original) The method of claim 2 wherein said feature value set comprises discrete values assigned to selected features of a generic network terminal device.
6. (Original) The method of claim 5 wherein said generic network terminal device comprises a set of device features selected from the display features of the plurality of user network terminal devices.
7. (Cancelled)

8. (Currently Amended) The method of claim 50+ wherein said step of converting the device-independent content comprises the step of invoking said markup information corresponding to the device feature values associated with the said requesting user network terminal device.

9. (Currently Amended) The method of claim 50+ wherein said step of converting the device-independent content comprises the step of removing said markup information from said device-independent content.

10. (Currently Amended) The method of claim 50+ further comprising the steps of:
identifying that content in said authored content which requires author annotation; and
automatically analyzing said device-independent content; and
automatically embedding meta-data into said device-independent content requiring author
annotation, said meta-data comprising device based on the feature values based on
the device-independent content.

11. (Currently Amended) The method of claim 50+ wherein said requesting user network terminal device comprises at least one of a wireless telephone and a personal digital assistant.

12. (Currently Amended) The method of claim 50+ further comprising the step of identifying said requesting user network terminal device prior to said step of identifying associating one or more of the device feature display values associated with the user network terminal device.

13. (Original) The method of claim 12 wherein said step of identifying said requesting user network terminal device comprises the step of reading network terminal device information contained in said request.

14. (Currently Amended) The method of claim 50+ wherein said step of converting the device-independent content comprises the steps of:

determining the array of display pixels available in said requesting user network terminal device based on from the device feature values associated with the user network terminal device;

comparing said array of display pixels with an array of image pixels corresponding to an ~~authored content~~ image in the device-independent content;

selecting said ~~authored content~~ image for display in said requesting user network terminal device if said array of image pixels does not exceed said array of display pixels; and

suppressing said ~~authored content~~ image from display if said array of image pixels does exceed said array of display pixels.

15. (Currently Amended) The method of claim 50 wherein said step of converting the device-independent content comprises the steps of:

determining an aspect ratio for said requesting user network terminal device from the device feature values associated with the user network terminal device;

sending ~~authored content~~ marked with an attribute of square to said requesting user network terminal device if said aspect ratio is square;

sending ~~authored content~~ marked with an attribute of portrait to said requesting user network terminal device if said aspect ratio is portrait; and

sending ~~authored content~~ marked with an attribute of landscape to said requesting user network terminal device if said aspect ratio is landscape.

16. (Currently Amended) The method of claim 50 wherein said step of converting the device-independent content comprises the steps of:

determining that said ~~authored device-independent~~ content is marked as having a uni-axis free form characteristic;

identifying the number of segments supported by the display in said requesting user network terminal device;

concatenating a number of rows for sending to said requesting user network terminal device if said uni-axis free form characteristic includes a list characteristic, wherein said number of rows corresponds to said number of segments supported; and

concatenating a number of columns for sending to said requesting user network terminal device if said uni-axis free form characteristic includes a column characteristic, wherein said number of columns corresponds to said number of segments supported.

17. (Currently Amended) The method of claim 50~~4~~ wherein said step of converting the device-independent content comprises the steps of:

determining that said ~~authored~~ device-independent content is marked as having bi-axially free form characteristic;

identifying the character count supported by a display in said requesting user network terminal device;

sending to said requesting user network terminal device a segment of ~~authored~~ content, wherein the character count in said segment corresponds to said character count supported by said display.

18-19. (Cancelled)

20. (Currently Amended) The communication system of claim 51~~4~~⁸ further comprising a device profile repository accessible by said network terminal device detector, said device profile repository including a feature-value set for the requesting user network terminal device, said feature-value set including a set of selected user network terminal device features with one or more discrete device feature values assigned to each said selected user network terminal device feature.

21. (Currently Amended) The communication system of claim ~~51~~48 further comprising a content repository accessible by said origin server, said content repository for storing annotated authored content ~~generated by the content author~~ whereby said origin server provides device-independent content from said annotated authored content.

22. (Currently Amended) The communication system of claim ~~51~~48 wherein said at least one selected user network terminal device feature value is selected from the features of the ~~plurality of requesting user network terminal device devices~~ in accordance with a pre-established criterion.

23. (Currently Amended) The communication system of claim ~~51~~48 wherein said set of ~~selected device~~ feature values associated with the requesting user network terminal device ~~features~~ comprises a member of the group consisting of display size, aspect ratio, display line count, color capability, graphics capability, variable size text capability, different font capability, and input capability.

24. (Currently Amended) The communication system of claim ~~51~~48 wherein said requesting user network terminal device comprises at least one of a wireless telephone and a personal digital assistant.

25. (Cancelled)

26. (Currently Amended) The method of claim ~~52~~25 wherein said step of converting comprises the step of converting the content by interpreting metatags embedded in the content.

27. (Currently Amended) The method of claim ~~52~~25 wherein said step of converting comprises the step of converting the content into a landscape-formatted display format if the terminal device has a landscape-formatted display, and converting the content into a portrait-formatted display format if the terminal device has a portrait-formatted display.

28. (Currently Amended) The method of claim 5225 wherein said step of converting comprises the step of converting the content into a first aspect ratio if the terminal device has said first aspect ratio, and converting the content into a second aspect ratio if the terminal device has said second aspect ratio.

29. (Currently Amended) The method of claim 5225 wherein said step of converting comprises the step of converting the content into a small-sized image if the terminal device accommodates only small-sized images, and converting the content into a large-sized image if the terminal device accommodates large-sized images.

30. (Currently Amended) The method of claim 5225 further comprising the step of annotating the content with meta-data to indicate the manner in which portions of the content should be represented on a plurality of different terminal devices, ~~the terminal devices~~ having mutually incompatible display characteristics.

31. (Currently Amended) The method of claim 5225 wherein said step of converting comprises the step of performing a best-fit match between said device display characteristics and one of a plurality of display formats.

32. (Cancelled)

33. (Currently Amended) The method of claim 5332, wherein step (b) ~~(a)~~ comprises determining a device type of the requesting data processing device, and looking up the one or more display feature values based on the device type.

34. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to a display size of the requesting data processing device.

- 35. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to an aspect ratio of the requesting data processing device.
- 36. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to a display line count of the requesting data processing device.
- 37. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to a color capability of the requesting data processing device.
- 38. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to a variable size text capability of the requesting data processing device.
- 39. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to a multiple font capability of the requesting data processing device.
- 40. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to an input capability of the requesting data processing device.
- 41. (Currently Amended) The method of claim 5332 wherein one of said one or more display feature values corresponds to an input bandwidth of the requesting data processing device.
- 42. (Cancelled)
- 43. (Currently Amended) The method of claim 5342, wherein said converting ~~altering~~-step comprises removing the annotations from the device-independent content.
- 44. (Currently Amended) The method of claim 5332, wherein said requesting data processing device comprises a wireless telephone.

45. (Currently Amended) The method of claim 5332 wherein step (e) ~~(b)~~ comprises the steps of:

determining an array of display pixels available in said requesting data processing device based on the one or more display feature values;
comparing said array of display pixels with an array of image pixels corresponding to a content image;
selecting said content image for display in said requesting data processing device if said array of image pixels does not exceed said array of display pixels; and
suppressing said content image from display if said array of image pixels does exceed said array of display pixels.

46. (Currently Amended) The method of claim 5332, wherein step (e) ~~(b)~~ comprises steps of:
determining an aspect ratio for said requesting data processing device based on the one or more display feature values; and
sending device-specific content in the determined aspect ratio to said data processing terminal device.

47. (Previously Presented) The method of claim 46, wherein said aspect ratio comprises a square aspect ratio.

48. (Previously Presented) The method of claim 46, wherein said aspect ratio comprises a portrait aspect ratio.

49. (Previously Presented) The method of claim 46, wherein said aspect ratio comprises a landscape aspect ratio.

50. (New) A method for providing device-specific content, comprising:

receiving device-independent content comprising markup information identifying one or more device feature values associated with the device-independent content, wherein the device-independent content is responsive to a content request from a user network terminal device;

identifying one or more device feature values associated with the user network terminal device;

matching at least one of the device feature values associated with the device-independent content with at least one of the device features values associated with the user network terminal device;

based on said matching, converting the device-independent content into device-specific content adapted to said user network terminal device; and

providing the device-specific content to the user network terminal device.

51. (New) A communication system for providing device-specific content, comprising:
- a network terminal device detector for receiving a content request from a user network terminal device and determining therefrom one or more device feature values associated with the requesting user network terminal device;
 - an origin server for receiving said content request and, in response thereto, providing device-independent content corresponding to said content request, wherein said device-independent content comprises markup information identifying one or more device feature values associated with the device-independent content;
 - a transformer for receiving said device-independent content from said origin server, for associating at least one of the device feature values associated with the device-independent content with at least one of the device features values associated with the user network terminal device, and for transforming said device-independent content into device-specific content formatted for the requesting user network terminal device.

52. (New) A method of presenting content to a terminal device, said method comprising the steps of:

- receiving a request for content from a terminal device;
- based on said request, identifying one or more device display characteristics associated with the terminal device;
- receiving content responsive to the request, wherein said content comprises markup information identifying one or more content display characteristics, said content display characteristics expressing an author intent for displaying said content on a plurality of devices having different display characteristics;
- matching one or more device display characteristics with one or more content display characteristics;
- based on said matching, converting the content into a device-dependent format compatible with one or more device display characteristics; and
- transmitting said device-dependent formatted content to the terminal device.

53. (New) A method for providing device-specific content comprising steps of:

- (a) receiving a request for content from a data processing device;
- (b) identifying one or more display feature values associated with the requesting data processing device;
- (c) receiving device-independent content responsive to the request for content, the device-independent content comprising embedded annotations specifying author intent for displaying the content on a plurality of devices having different display characteristics, said embedded annotations including one or more content display feature values;
- (d) matching one or more display feature values associated with the requesting data processing device with one or more content display feature values in the embedded annotations in the device-independent content; and
- (e) converting the device-independent content into device-specific content based on said matching, said device-specific content compatible with one or more display feature values associated with the requesting data processing device.
